

## Clean Fuels

Prince George is an industrial hub in British Columbia, Canada and is the Northern BC Hydrogen Hub anchor.

While local production exists, demand for clean fuels is outstripping supply in core local sectors such as forestry, mining, and transportation.

## Local Advantages

**Government Support** through tax incentives and grants.

**Central Location** proximate to major regional projects.

**Affordable Land** and manufacturing space.

**Skilled Workforce** in manufacturing and project development.

# Key Opportunities

## Clean Fuels

### Demand Drivers

Anchor for the Northern BC Hydrogen Hub to promote hydrogen supply and demand co-location.

Abundant forestry and other feedstock seeking new use cases for value creation.

Off-take demand from local industry seeking low carbon fuels to reduce emissions and costs.

Distribution opportunities as a hub serving markets across North America as the worlds largest market for biofuels

## The Prince George Clean Fuel Opportunity

### Feedstock

- Low-cost, 98% clean energy from 500kV transmission
- Low carbon and affordable natural gas
- Abundant bio feedstock from local industry and agriculture

### Production

- Abundant land permitted for production
- Geological features ideal for CCUS
- Strong throughrate supply of clean water for electrolysis

### Distribution

- Access to natural gas
- Hub for North American rail network and 2x major highways
- Near to closest port in North America to Asia

### End Use

- Demand for clean fuels in chemicals, mining and forestry
- Decarbonizing port and logistics activity
- Green logistics route potential from road, rail, air hub
